Vigilancia  
Tecnológica  
4º trimestre 2021

NIPO: 116-19-050-9

En este Boletín de Vigilancia Tecnológica se recogen, de manera trimestral, los avances acontecidos en el campo de la tecnología de Impresión 3D que se materializa en forma de solicitudes de patente en todo el mundo.

Aunque en los años 80 comenzaron a desarrollarse los primeros equipos y materiales sobre la tecnología de impresión 3D también denominada fabricación aditiva, no fue hasta 1986 cuando aparece en el mercado la primera impresora 3D comercial, patentada por Charles W. Hull, premiado por la Oficina Europea de Patentes

como inventor del año en 2014 en la categoría de inventores no europeos.

Cuando trataba de buscar un sistema para mejorar el proceso de realización de prototipos de pequeñas piezas de plástico que utilizaba para testar nuevos diseños de productos, desarrolló una máquina de impresión 3D que conseguía realizar en pocos minutos procesos que por aquel entonces llevaban semanas.

PROCESAMIENTO DE DATOS

Desde entonces, la tecnología no ha parado de evolucionar, especialmente en los últimos años, alcanzándose a partir de 2017 un verdadero auge, cuando se incorpora la automatización utilizando software de inteligencia artificial que permite industrializar la fabricación aditiva y multiplicar la capacidad de los sistemas. En estos momentos, en que la pandemia del corona virus SARS-CoV-2 azota a la población mundial, la impresión 3D se ha puesto de gran actualidad. La necesidad de fabricar de forma urgente respiradores o material de protección personal ha despertado el interés por la utilización de esta tecnología, surgiendo así multitud de iniciativas públicas y privadas.

En los últimos años de evolución de la impresión 3D hemos visto pasar del desarrollo conjunto de nuevas tecnologías y materiales innovadores aplicados principalmente a la creación de prototipos y diseños personalizados, a la consecución de productos casi impensables hace tan solo una década. Gracias a esta increíble tecnología hemos visto imprimir, órganos, coches e incluso edificios.

Desde la Oficina Española de Patentes y Marcas, y en cumplimiento de su doble objetivo de proteger y fomentar la innovación tecnológica en nuestro país, así como de divulgar la información técnica que contienen las patentes a través de sus

servicios de Información Tecnológica, se realiza este nuevo Boletín de Vigilancia Tecnológica, que se suma a los dieciséis *Boletines VT* que venimos publicando desde el año 2000 con periodicidad trimestral. Nuestro objetivo es dar a conocer las nuevas solicitudes de patentes que se publican a nivel mundial relacionadas con la tecnología de impresión 3D.

En este Boletín, se incluye una selección de las solicitudes de patentes publicadas a nivel mundial durante el cuarto trimestre de 2021, distribuidas en cinco apartados: procesos, materiales, dispositivos, productos y procesamiento de datos.

Para cada patente se incluye su número de publicación, con un enlace que permite la consulta del documento completo, el solicitante, el país de origen y su título.

Esperamos que la información aportada en este Boletín de Vigilancia Tecnológica, sirva para identificar tendencias tecnológicas y sus actores, así como para contribuir a la utilización del conocimiento contenido en los documentos de patente como punto de partida para emprender nuevas actividades de investigación y desarrollo. Para suscribirse a este Boletín basta con cumplimentar este [formulario de suscripción](#).

# ANÁLISIS ESTADÍSTICO DE LAS SOLICITUDES DE PATENTE PUBLICADAS EN EL PERÍODO 2015-2021

Se ha realizado un estudio estadístico con el fin de analizar la evolución tecnológica de la Impresión 3D en lo que respecta a la protección de invenciones por medio de patentes de invención. Continuando con la filosofía aplicada para el análisis de esta evolución, se han extraído los datos de las publicaciones de solicitudes de patentes publicadas desde el año 2015, momento en el que se pudo apreciar claramente el despegue de esta tecnología en términos de innovación. La herramienta empleada para este estudio ha sido Global Patent Index (GPI) de la Oficina Europea de Patentes, extrayéndose los datos a fecha de 20/01/2022. Se han recuperado un total de 50.472 familias de patentes, que corresponden a 120.336 documentos de patente.

En la Gráfica 1 se recoge la evolución del número de solicitudes del sector desde el año 2015. En ella se observa que, tras la tendencia al alza, el año 2021 se ha producido una cantidad similar al año 2020.

Gráfica 1. Número de solicitudes publicadas por año desde el 2015 hasta el 2021

La Gráfica 2 agrupa los documentos de patente recuperados con relación al país de origen de la tecnología de impresión 3D. Se puede apreciar que China figura en primer lugar, con una enorme diferencia respecto del segundo país con mayor número de publicaciones, que es Estados Unidos. En el caso de España, nuestro país figura en el puesto número 21, con 54 patentes publicadas.

Gráfica 2: Documentos de patente agrupados por país de prioridad

La Gráfica 3, se muestra la relación de los solicitantes con mayor número de patentes publicadas en relación con la tecnología de Impresión 3D. Se observa que, de manera casi exclusiva, los grandes titulares de la innovación son empresas, destacando la empresa Hewlett Packard como líder del sector.

Gráfica 3: Mayores solicitantes de solicitudes de patente

Para finalizar, la Gráfica 4 plasma la actividad innovadora de las mayores empresas en el sector, año a año. Se puede observar que, para las empresas más punteras, el año 2019 fue el más activo, viéndose ligeramente reducido en el año 2020 y manteniéndose relativamente estable en el año 2021.

Gráfica 4: Actividad en la solicitud de patentes año a año de los mayores solicitantes de patentes de impresión 3D.
